SUMMARY

Analyst with experience investigating complex operational issues, identifying hidden patterns in data, and translating findings into actionable solutions. Skilled at combining analytical thinking, technical problem-solving, and data storytelling to drive measurable improvements and informed decision-making.

SKILLS

- **Data Analysis & Visualization:** SQL, Advanced Excel, Power BI, Tableau, Python (Pandas, Matplotlib, Seaborn)
- **Database & Cloud:** Data Validation, Structured Data Analysis, Google Cloud Platform, BigQuery.
- **Analytics & Investigation:** Exploratory Data Analysis (EDA), Trend Analysis, Root Cause Analysis (RCA), Data Cleaning, Anomaly Detection
- **Machine Learning:** Classification Models, Clustering Techniques, Dimensionality Reduction
- **Professional Skills:** Data Storytelling, Reporting, Technical Documentation, Cross-Functional Collaboration

WORK EXPERIENCE

Assistant System Engineer - Tata Consultancy Services

Sept 2024 - Present

- Collaborated with client stakeholders and internal teams to understand business requirements, discuss solution approaches, and communicate implementation outcomes, ensuring successful delivery of business-critical enhancements.
- Contributed to the development, enhancement, and maintenance of enterprise applications by translating requirements into technical solutions, performing defect analysis, debugging issues, and implementing system improvements.
- Investigated production incidents and operational anomalies through detailed log analysis, identifying root causes and implementing corrective actions to maintain system reliability.
- Monitored critical business workflows and analyzed exception trends, proactively resolving issues before they impacted service performance or downstream operations.
- Conducted data validation and recovery testing to ensure data integrity, business continuity, and successful execution of critical processing workflows.
- Created technical documentation and incident reports, translating complex technical findings into actionable insights that supported faster issue resolution and effective stakeholder communication.

Data Analyst Intern - Savemom

Jan 2024 - May 2024

- Analyzed operational datasets using Excel and SQL to identify trends and support reporting and business analysis needs.
- Cleaned, organized, and validated data to improve data accuracy, consistency, and usability for decision-making.
- Developed Tableau dashboards and visualizations to communicate key findings, presenting analytical insights to client stakeholders and supporting data-driven discussions.
- Collaborated with cross-functional teams to support solution implementation while maintaining data quality and privacy standards.

PROJECTS

- **Strategic Market Segmentation of Global Grain Importers:** Applied clustering and EDA techniques to analyze trade datasets and identify market segments.
- **Automated Plant Species Classification:** Built machine learning classification models for plant species prediction and performance evaluation.
- **Healthcare Monitoring & Alert System:** Developed a Python-based automated monitoring solution integrated with IFTTT for real-time alerts.

EDUCATION:

B.E. Electronics & Communication Engineering | K.L.N. College of Engineering

CGPA: 8.81

Oct 2020- Mar 2024

CERTIFICATION:

- Google Data Analytics Professional Certificate
- Google Generative AI Leader
- Python for Data Science (Eduureka)
- Cisco Data Analytics Essentials

ACHIEVEMENTS

- TCS' AI Spark - Awarded by TCS
- Best Outgoing student of year 2023-2024 - Awarded by K.L.N College of Engineering.
